

Human Body Infrared Sensor Switch

MR-HW206B

IP54

Item Code	Detection angle	Induction Delay	Illumination Adjustment	kg
MR-HW206B	180°	3s~7 min	2 Lux ~ 2000 Lux	0.15

Dimensions in mm

Button Introduction

A LUX

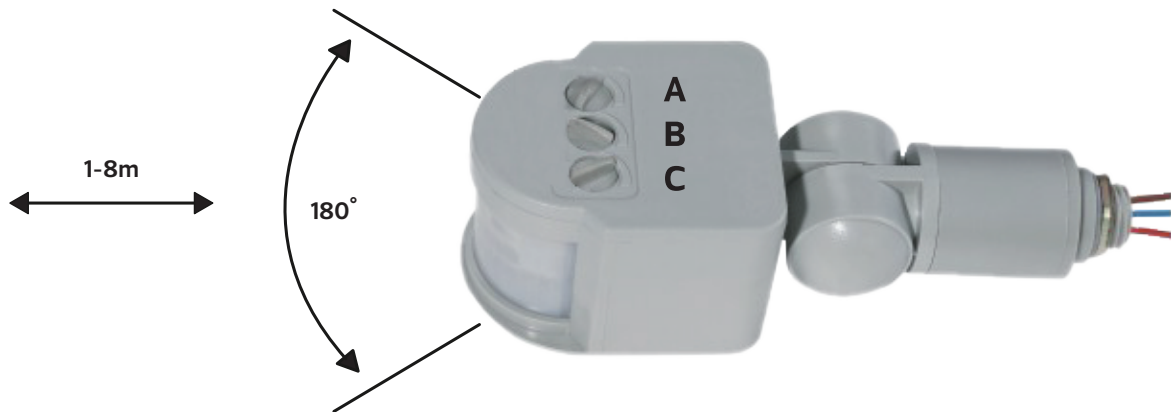

Adjusts the value of light, "Sun" The icon is all-weather, "Moon" The icon is dark at night.

B TIME

Adjust induction delay length, greater the value of the clockwise direction.

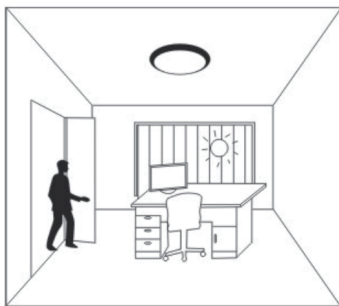

C SENS

Adjust the sensing distance, greater the value of the clockwise direction.

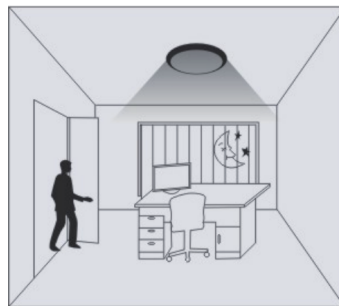

Functional Features

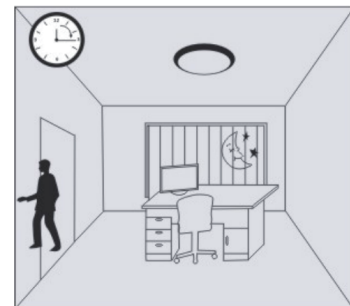

Using infrared pyroelectric sensor, Integrated circuit chip and advanced production technology, Stable and reliable performance. When someone enters the scope of the product and triggers the action, Infrared sensor work lights up, When people leave the detection range, lights went out automatically.

When the ambient light is bright enough, even if you detect a temperature moving object, lights don't come on automatically.

When ambient light is lower than the preset light threshold value, the sensor detects a temperature moving object, the lamp lights up automatically.

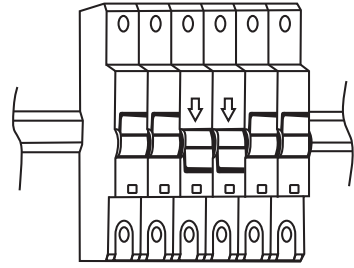

In the delay time, the sensor doesn't detect any temperature moving objects, the lights are off automatically.

NOTE:

1. The installation of the product must be a professional electrician

Turn Off

First, you make sure the power is off.
